

## REMARKS

The Specification was reviewed for typographical and grammatical errors during the prosecution of the parent case. A few minor errors were discovered, and they were fixed. These same amendatory fixes have been requested here. There were some minor issues connected with the Drawings, and these, too, have been attended to. It is believed that none of these amendments is controversial in the least, and that none introduces any new matter whatsoever. Finally, the recitation required under 35 USC 120 of a co-pending Parent Application has been added to the Specification.

Claim 2 was finally rejected in the Parent Case, and canceled therein under a Rule 116 Amendment to allow that case to issue. Claim 2 is re-presented here with amendments that emphasize and more distinctly claim the novel features of the invention. In particular, the Claim has been amended to distinguish it over logic analyzers such as Haag and to emphasize its operation as an Eye Diagram Analyzer.

**THEREFORE**, re-examination is requested, and favorable action is respectfully solicited.

Respectfully submitted,  
Richard A. Nygaard, Jr.
